CITY OF CHICAGO
1907

CHICAGO, October 21, 1907.

Hon. John S. Perpa, Chairman,

Committee on Street Nomenclature.

DEAR SIR—Pursuant to request of your committee, I beg to submit herewith plan for new system of house-numbering for the City of Chicago, together with tabulated statement of duplicate and other street names requiring a change.

The instructions of your committee were to work out a new system of house-numbering, without disturbing the present system of street nomenclature, excepting in the case of duplicate street names, and where one street, whether continuous or only open at intervals, had two or more different names.

In addition, I was instructed by your committee not to include the down town district in the new house-numbering scheme but to leave the numbers in that portion of the city undisturbed.

In the preparation of the plan I have followed the instructions of your committee and find that the down town exception can be made with very little interference with the general scheme.

As will be seen by reference to the maps accompanying this report, I recommend that State street be established as a north and south base line, and Madison street as the east and west base, from which two bases all houses be numbered on a basis of 800 numbers to the mile, or 100 numbers to the prevailing city block of 600 feet. Inasmuch as it is not the intention of your committee to make a change in the street nomenclature system an exception is made in the mile between Madison and 12th streets, where 1,200 numbers are allotted, in order to conform with present conditions. Two other exceptions already exist, namely, between 12th and 22d streets, where we have 1,000 numbers to the mile, and between 22d and 31st streets, where we have 900 numbers to the mile. These exceptions, however, are necessary in order to have the house numbers correspond with the intersecting streets, the names of which are not to be changed.

On January 14, 1895, when the City Council passed a general ordinance which, among other things, changed the names of all north and south streets, from Crawford avenue west to the western limits of the city, to numbered avenues and courts, State street and 800 numbers to the mile were used as a basis from which to determine the numbers to be used for above mentioned avenues and courts, thus: Crawford avenue was five miles west of State street, 800 numbers to the mile, multiplied by five gave 4000 or 40th avenue for the new name, and so on out to the western limits of the city.

If the plan of house numbers now proposed be adopted the house numbers on all east and west streets, from 40th avenue west to the city limits, would conform with the names of the north and south streets as at present existing. Thus, 4000 West North avenue would indicate the corner of North and 40th avenues, and 5200 West Fullerton avenue would likewise indicate the corner of Fullerton and 52d avenues. This is the same system at present in use on the south side, which has proven so satisfactory, and which would not be disturbed by the adoption of this proposed plan.

In connection with the street nomenclature, all east and west streets, east of the north and south base line (State street), would be known just

simply as Chicago avenue, 12th street, 43d street, etc., and west of the base line as West Chicago avenue, West 12th street, West 43d street, etc.

All north and south streets which extend both north and south of the east and west base line would be known as North Halsted street, South Halsted street, North Spaulding avenue, South Spaulding avenue, etc., and all other north and south streets which lie wholly north or south of the base line would be known just simply as Cottage Grove avenue, Dearborn avenue, etc. This is all in conformity with the present street names and no change in prefixes would be required excepting those necessitated by the change from existing to proposed base lines.

All east and west streets north of the point where State street runs into the lake would have the prefix "west," notwithstanding that there would be no streets east of the base line. This, however, is a point which it might be profitable for your committee to discuss.

Among the advantages to be derived from the proposed system are the following: No change whatever is made in the present numbering system on north and south streets in the entire portion of the city lying between the south branch of the river and the southern limits of the city; this is practically 60 per cent of the entire area.

No change of house numbers is made on east and west streets in that portion of the city known as Austin, excepting in sections 16 and 17.

In 75 per cent of the area of the city the house number would indicate its exact location. In the remaining 25 per cent the location would be indicated in one direction.

A house situated on Devon avenue, say $4\frac{1}{2}$ miles west of State street, would have the same number as a house situated $4\frac{1}{2}$ miles west of State street, on say 87th street (18 miles away), and if a line were drawn between these two points all of the houses over which it passed, on east and west streets, would have exactly the same number. The same conditions would obtain on every street in the city, no matter what their direction.

One change, however, would have to be made on all east and west streets south of 39th street and west of State street. These streets as at present numbered conform to the proposed system of 800 numbers to the mile or 100 numbers to the 600 foot block, and are numbered west from State street, but for some unaccountable reason instead of commencing with zero they commence with 100 at State street, running west. This makes the number on say 47th street, at 40th avenue, 4100 instead of 4000, which latter number would agree with the name 40th avenue, as at present existing. The effect of this change would be to reduce every house number on east and west streets in the territory above mentioned exactly 100. This would mean the changing of only one figure in the existing numbers and, therefore, would not be a very serious matter.

All diagonal streets, like Lincoln avenue, Milwaukee avenue, Ogden avenue, Cottage Grove avenue, etc., would retain their names, and would be numbered and regarded as north and south or east and west streets, according to their general direction.

The objections of property owners and business men to the general plan, because of financial loss through making necessary changes in any printed stationery, lettering on wagons, etc., could be overcome by making the ordinance effective in say two or three years. This would give ample time to provide for the change without material financial loss.

Following will be found tabulations under their respective headings, as follows:

"Duplicate Street Names."

Of these will be found 478.

"Street names in that portion of the city, formerly Austin, which should be changed to conform with names of their continuations in original city."

A total of 37.

"Street names which should be changed to conform with correct names of their continuations as established by ordinance of January 14, 1895."

A total of 11.

"Disconnected streets on the same line but with different names."

The method to be pursued in making necessary changes in street names is a matter for your committee to decide.

There are, of course, details to be considered in connection with the plan which I have not considered necessary to touch upon in this report but which can be taken up verbally, to better advantage, with your committee.

I trust that this report will meet with the approval of your committee, and I shall be glad to give any such verbal explanation of the plan as may be required.

Respectfully submitted,

Jno. D. RILEY,

Supt. of Maps.
